

# Pocket Bimetal Thermometer AQA 1370

\$5.45 / each (Quantity Discounts Available)

Introducing a new bi-metal thermometer at an astounding low price. Compare this bi-metal with others on the market and you will find that ours is remarkably economical. In fact, it's so economical and reliable, you'll want to make sure that everyone has one.

The bi-metal is best suited for temperature measurement in liquids and soft solids, or foods with a high liquid content because liquids transfer heat easily and quickly. For frozen food temperature measurement, an ice pick should be used to make a hole in the product then insert the bi-metal.

Accurate readings are only possible when the tip is inserted to the "dimple" (2 1/4") on the shaft. The dimple indicates the temp. sensing area. Always clean and sanitize the probe needle between readings.

Bimetal thermometers can be accurate enough for many important food safety and processing applications. The AQA 1370 is suitable for commercial kitchen usage and other similar applications. Remember that bimetals require at least 15 seconds to equilibrate. For best accuracy, use a standard "wait period".

- Temp. Range: 0-220°F
- Stainless Steel Needle: 5" in length
- Easy to read 1" dial
- Pocket Clip
- Needle Protector
- No battery necessary

The AQA 1370 is made of completely food safe materials and food grade stainless steel. The unit is water resistant, but is not designed for full immersion of the entire unit. Calibration checking instructions are included with each thermometer.
